

Renewing Valura Certificates

Each certificate is connected to a file in the folder ./certificates/

On the right side you see which certificate button opens which file.

In order to update the certificate you just need to replace the file in the Folder.

Please make sure to name the file correctly. Naming the file incorrectly loses the connection between the button and the file. Below is a table on how the files should be named and some rules to follow when naming the files in order to maintain the same name throughout.

RULES.

- 1. All files start with the word “certificate”**
- 2. Only one dash after the word “certificate”**
- 3. Certificates are numbered from top to bottom. First one has the number one at the end. Second one has the number two and third one has the number three.**
- 4. There are no spacebars in the file names.**
- 5. All file names must end with the .pdf extension.**
